

Keep Star Pickets away from Traffic Flow!

Karza

Star pickets should never be used in the road or near the line of traffic flow. Where there is the potential for direct interaction between a vehicle and the metal picket the star picket should not be located (standing or stored) in the vicinity.

In an accident or if clipped by a moving vehicle a star picket can easily become airborne and has the potential to penetrate objects (including vehicles) and people. If driven over, even when lying flat, a star picket can easily penetrate the floor of a vehicle and can impale an occupant. Bike riders (both powered and peddle) face an extremely high risk of being impaled by star pickets, particularly at night, in the wet or when turning corners.

Star Pickets have a use in construction BUT NOT NEAR VEHICLES OR BIKES!
